DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of invention group I, claims 50-87 and 90-91, in the reply filed on 25 September 2006 is acknowledged. Since no specific traversal grounds were provided in the reply, the election is treated as election without traverse.
2. Claims 88-89 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention group II, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 25 September 2006.
3. After additional review of the elected claims 50-87 and 90-91, the examiner believes additional restriction is proper and is established as follows:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

 - I. Claims 50-66 and 90-91, drawn to an apparatus, classified in class 204, subclass 228.7.
 - II. Claims 67-87, drawn to an apparatus, classified in class 204, subclass 224M.
4. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because polishing apparatus of invention I

Art Unit: 1742

does not require a chelate film removing meanings as required by the polishing apparatus of invention II. The subcombination has separate utility such as an electropolishing, electroplating, or chemical mechanical polishing apparatus.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

5. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Robert J Depke on 5 December 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

Art Unit: 1742

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
